### [6] Education & Research

#### [16] Number of sustainability community services project organised and/or involving students

Project name	participants	Project duration	Project area
Promoting Ecological Culture in Alliance with the Community	72	6 months	

#### Description:

The Philosophy of the project revolves around addressing environmental problems, from different perspectives of knowledge, and trying to focus more on contributing to possible solutions from the causes, rather than on environmental problems, focused on their effects, seeking to combine efforts from different sectors. , public and private, academic, community, neighborhood and civil society in general in favor of the environment, through the implementation of activities and initiation of a process of sustainable strategic alliances under the motto "for the Planet our only home", generating spaces for reflection and action about the need to undertake changes in habitual behavior in the face of unsustainable usual practices. All of this in order to promote ecologically responsible behaviors through various activities and processes that involve the participation of the communities involved, especially those of the Libertador Municipality of the Capital District.

The activities have been conceived under a scheme that is 25% internal at the UCV and 75% in communities, with the understanding that the practice and promotion of ecologically responsible practices on the university campus itself gives us greater moral authority vis-à-vis the communities to communicate from the shared experience.
